Q.7) Write a C program to create and display singly linked list.

```
#include  <stdio.h>
#include <stdlib.h>
struct node
{
   int data;
   struct node *next;
};
int main()
{
   struct node *head, *newNode, *temp;
   int n, i;
   head = NULL;
   printf("Enter number of nodes: ");
  scanf("%d", &n);
   for (i = 1; i <= n; i++)
   {       newNode = (struct node*)malloc(sizeof(struct node));
           printf("Enter data: ");
           scanf("%d", &newNode->data);
            newNode->next = NULL;
            if (head == NULL)
           {
                   head = newNode;
           }
           else
           {
                   temp = head;
```

```
            while (temp->next != NULL)
            {
                temp = temp->next;
            }
            temp->next = newNode;
        }
    }
    printf("\nSingly Linked List:\n");
    temp = head;
    while (temp != NULL)
    {
        printf("%d -> ", temp->data);
        temp = temp->next;
    }
printf("NULL");
    return 0;
}
```

Output:
